## ALIGNMENTS

```
ion relates to antisense compounds targeted to a ing human KOX 1 (zinc finger protein 10). The antisense an antisense oligonucleotide that specifically e nucleic acid and inhibits the expression of KOX 1. conucleotide is a chimeric oligonucleotide. The leotide comprises at least one modified internucleoside ya phosphorothicate linkage. It also comprises at ya ghosphorothicate linkage. It also comprises at least ya phosphorothicate linkage. It also comprises at least ya phosphorothicate finkage. The also comprises at least ya ghosphorothicate further comprises at least obase, preferably a 2'-O-methoxyethyl (2'-MOE) antisense oligonucleotide further comprises at least obase, preferably a 5-methylcytosine. The antisense re useful for the treatment of diseases such as disorders, e.g. cancer, viral or bacterial infections, ving hyperactivation of an immune response. The present of an antisense oligonucleotide used in the examples of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       base= OTHER

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to antisense compounds targeted to a nucleic acid encoding human KOX 1 (zinc finger protein 10). The antisense compound comprises an antisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits the expression of KOX 1. The antisense oligonucleotide is a chimeric oligonucleotide. The antisense oligonucleotide comprises at least one modified internucleoside linkage, preferably a phosphorothioate linkage. It also comprises at least one modified sugar molety, preferably a 2'-O-methoxyethyl (2'-MOE) sugar molety. The antisense oligonucleotide further comprises at least one modified nucleobase, preferably a 5-methylcycosine. The antisense oligonucleotides are useful for the treatment of diseases such as hyperproliferative disorders, e.g. cancer, viral or bacterial infections, and diseases involving hyperactivation of an immune response. The present equence represents a human KOX 1 DNA target sequence for an antisense

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The antisense oligonucleotide is a chimeric oligonucleotide. The antisense oligonucleotide comprises at least one modified internucleoside linkage, preferably a phosphorothioate linkage. It also comprises at least one modified sugar moiety, preferably a 2'-O-methoxyethyl (2'-MOE) sugar moiety. The antisense oligonucleotide further comprises at least one modified nucleobase, preferably a 5-methylcytosine. The antisense oligonucleotide turber comprises such as coligonucleotides are useful for the treatment of diseases such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to antisense compounds targeted to a nucleic acid encoding human KOX 1 (zinc finger protein 10). The anticompound comprises an antisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits the expression of KOX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense oligonucleotide targeted to a nucleic acid encoding KOX 1, useful for treating cancer, viral or bacterial infections or a disease involving hyperactivation of an immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; KOX 1; zinc finger protein 10; antisense therapy; hyperproliferative disorder; cancer; viral infection; hyperactivation; immune response; cytostatic; bacterial infection; hyperactivation; immune response; cytostatic;
Human; KOX 1; zinc finger protein 10; antisense therapy; hyperproliferative disorder; cancer; viral infection; bacterial infection; hyperactivation; immune response; c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to antisense compounds targeted to a nucleic acid encoding human KOX 1 (zinc finger protein 10). The antisense compound comprises an antisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits the expression of KOX 1. The antisense oligonucleotide is a chimeric oligonucleotide. The antisense oligonucleotide comprises at least one modified internucleoside linkage, preferably a phosphorothioate linkage. It also comprises at least one modified sugar moiety, preferably a 2'-O-methoxyethyl (2'-MOE) sugar moiety. The antisense oligonucleotide further comprises at least one modified nucleobase, preferably a 5-methylcycosine. The antisense oligonucleotides are useful for the treatment of diseases such as hyperproliferative disorders, e.g. cancer, viral or bacterial infections, and diseases involving hyperactivation of an immune response. The present bequence represents an antisense oligonucleotide used in the examples of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to antisense compounds targeted to a CC nucleic acid encoding human KOX 1 (zinc finger protein 10). The antisense CC compound comprises an antisense oligonucleotide that specifically CC hybridises with the nucleic acid and inhibits the expression of KOX 1. The antisense oligonucleotide is a chimeric oligonucleotide. The CC antisense oligonucleotide is a chimeric oligonucleotide internucleoside CC linkage, preferably a phosphorothioate linkage. It also comprises at CC linkage, preferably a phosphorothioate linkage. It also comprises at least one modified sugar moiety, preferably a 2'.O-methoxyethyl (2'-MOE) CC sugar moiety. The antisense oligonucleotide further comprises at least cone modified nucleobase, preferably a 5-methylcytosine. The antisense CC oligonucleotides are useful for the treatment of diseases such as CC hyperproliferative disorders, e.g. cancer, viral or bacterial infections, CC and diseases involving hyperactivation of an immune response. The present contends of the present involving hyperactivation of an immune response. The present contends of the present involving hyperactivation of an immune response. The present contends of the present involving hyperactivation of an immune response. The present contends of the present involving hyperactivation of an immune response. The present contends of the present involving hyperactivation of an immune response. The present contends of the present involving hyperactivation of an immune response. The present contends of the present involving hyperactivation of an immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

The antisense oligonuclectide comprises at least one modified internucleoside linkage, preferably a phosphorothicate linkage. It also comprises at least one modified sugar molety, preferably a 2'-O-methoxyethyl (2'-MOE) sugar molety. The antisense oligonuclectide further comprises at least one modified nucleobase, preferably a 5-methylcytosine. The antisense oligonuclectides are useful for the treatment of chases such as hyperproliferative disorders, e.g. cancer, viral or bacterial infections, and diseases involving hyperactivation of an immune response. The present sequence represents a human KOX 1 DNA target sequence for an antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to antisense compounds targeted to a nucleic acid encoding human KOX 1 (zinc finger protein 10). The antisense compound comprises an antisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits the expression of KOX 1.
                                                                                                                                                Human; KOX 1; zinc finger protein 10; antisense therapy; hyperproliferative disorder; cancer; viral infection; bacterial infection; hyperactivation; immune response; cytostatic;
                                                                                                                                                                                                                  Human KOX 1 DNA target sequence #5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antisense oligonucleotide targeted to a nucleic acid encoding KOX 1, useful for treating cancer, viral or bacterial infections or a disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   nucleic acid encoding human KOX 1 (zinc finger protein 10). The antisense compound comprises an antisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits the expression of KOX 1. The antisense oligonucleotide is a chimeric oligonucleotide. The antisense oligonucleotide comprises at least one modified internucleoside linkage. It also comprises at least one modified of a phosphorothicate linkage. It also comprises at least one modified sugar moiety, preferably a 2'-O-methoxycthyl (2'-MOE) sugar moiety. The antisense oligonucleotide further comprises at least one modified sugar moiety, preferably a 5-methyloxycsine. The antisense oligonucleotides are useful for the treatment of diseases such as hyperproliferative disorders, e.g. cancer, viral or bacterial infections, and diseases involving hyperactivation of an immune response. The present

The antisense compound comprises an antisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits the expression of KOX 1. The antisense oligonucleotide is a chimeric oligonucleotide. The antisense oligonucleotide comprises at least one modified internucleoside linkage, preferably a phosphorothicate linkage. It also comprises at least one modified sugar moiety, preferably a 2'-0-methoxyethyl (2'-MOE) sugar moiety. The antisense oligonucleotide further comprises at least one modified nucleobase, preferably a 5-methylcycosine. The antisense oligonucleotides are useful for the treatment of diseases such as hyperproliferative disorders, e.g. cancer, viral or bacterial infections, and diseases involving hyperactivation of an immune response. The present beguence represents an antisense oligonucleotide used in the examples of
                                                                                                                                                                                                                                                                                        Human; KOX 1; zinc finger protein 10; antisense therapy; hyperproliferative disorder; cancer; viral infection; bacterial infection; hyperactivation; immune response; c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example 15;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense oligonucleotide targeted to a nucleic acid encoding KOX 1, useful for treating cancer, viral or bacterial infections or a disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2004-052172/05

It also comprises at least one modified sugar moiety, preferably a 2'-Omethoxyethyl (2'-MOE) sugar moiety. The antisense oligonucleotide further comprises at least one modified nucleobase, preferably a 5-methylcytosine. The antisense oligonucleotides are useful for the treatment of diseases such as hyperproliferative disorders, e.g. cancer, viral or bacterial infections, and diseases involving hyperactivation of an immune response. The present sequence represents an antisense oligonucleotide used in the examples of the present sequence represents an antisense oligonucleotide used in the examples of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to antisense compounds targeted to a nucleic acid encoding human KOX 1 (zinc finger protein 10). The antisense compound comprises an antisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits the expression of KOX 1. The antisense oligonucleotide is a chimeric oligonucleotide. The antisense oligonucleotide is a chimeric oligonucleotide internucleoside linkage, preferably a phosphorothioate linkage. It also comprises at least one modified sugar molety, preferably a 2'-O-methoxyethyl (2'-MOE) sugar molety. The antisense oligonucleotide further comprises at least one modified nucleobase, preferably a 5-methylcytosine. The antisense oligonucleotides are useful for the treatment of diseases such as hyperproliferative disorders, e.g. cancer, viral or bacterial infections, and diseases involving hyperactivation of an immune response. The present requence represents an antisense oligonucleotide used in the examples of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human KOX-1 antisense oligonucleotide ISIS206100

                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a compound 8-80 nucleobases in length targeted CC to, and which specifically hybridises with a nucleic acid molecule cancoding KOX 1 (also known as zinc finger protein 10, whose gene is CC located on chromosome 12q13-qter), and inhibits the expression of KOX 1, in cells or tissues by contacting the expression of KOX 1 in cells or tissues by contacting the cells or CC expression of KOX 1 in cells or tissues by contacting the cells or CC condition associated with by KOX 1 administering to the animal a CC therapeutic or prophylactic amount of the compound and screening an antisense compound by contacting a preferred target region of a nucleic acid molecule encoding KOX 1 with one or more candidate antisense compounds and selecting for one or more candidate antisense compounds (compound, composition and methods are useful for treating diseases or CC conditions associated with KOX 1, such as hyperproliferative disorders (e.g. cancer), conditions arising from bacterial or viral infection, or CC conditions involving hyperactivation of an immune response. They are also cuseful in research and diagnostics. The present sequence is an antisense colloquoucleotide targeting human KOX-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              conditions associated with KoX 1 administrating disease or conditions associated with by KOX 1 administrating to the animal a therapeutic or prophylactic amount of the compound and screening an antisense compound by contacting a preferred target region of a nucleic acid molecule encoding KOX 1 with one or more candidate antisense compounds and selecting for one or more candidate antisense compounds that inhibit the expression of a nucleic acid encoding KOX 1. The compound, composition and methods are useful for treating diseases or conditions associated with KOX 1, such as hyperproliferative disorders (e.g. cancer), conditions arising from bacterial or viral infection, or conditions involving hyperactivation of an immune response. They are also useful in research and diagnostics. The present sequence is a target

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a compound 8-80 nucleobases in length targeted to, and which specifically hybridises with a nucleic acid molecule encoding KOX 1 (also known as zinc finger protein 10, whose gene is located on chromosome 12q13-qter), and inhibits the expression of KOX 1, i.e. an antisense oligonucleotide. Also included are inhibiting the expression of KOX 1 in cells or tissues by contacting the cells or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human KOX-1 gene, antisense target sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New antisense oligonucleotides that inhibit the expression of the zinc finger transcriptional repressor KOX 1, useful for treating conditions such as cancer, and hyperactivation of an immune response.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a compound 8-80 nucleobases in length targeted CC to, and which specifically hybridises with a nucleic acid molecule CC encoding KOX 1 (also known as zinc finger protein 10, whose gene is CC located on chromosome laq13-qter), and inhibits the expression of KOX 1, it cells or tissues by contacting the cells or CC expression of KOX 1 in cells or tissues by contacting the cells or CC condition associated with by KOX 1 administering to the animal a CC therapeutic or prophylactic amount of the compound and screening an animal having a compound by contacting an apreferred target region of a nucleic CC acid molecule encoding KOX 1 with one or more candidate antisense compound, composition and methods are useful for treating KOX 1. The CC conditions associated with KOX 1, such as hyperproliferative disorders CC (e.g. cancer), conditions arising from bacterial or viral infection, or CC (e.g. cancer) conditions arising from bacterial or viral infection, or CC conditions involving hyperactivation of an immune response. They are also cuseful in research and diagnostics. The present sequence is a target condition from the human KOX-1 genomic DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

The compound, composition and methods are useful for treating diseases or conditions associated with KOX 1, such as hyperproliferative disorders (e.g. cancer), conditions arising from bacterial or viral infection, or conditions involving hyperactivation of an immune response. They are also useful in research and diagnostics. The present sequence is a target

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a compound 8-80 nucleobases in length targeted to, and which specifically hybridises with a nucleic acid molecule encoding KOX 1 (also known as rinc finger protein 10, whose gene is located on chromosome 12q13-qter), and inhibits the expression of KOX 1, i.e. an antisense oligonucleotide. Also included are inhibiting the expression of KOX 1 in cells or tissues by contacting the cells or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a compound 8-80 nucleobases in length targeted CC to, and which specifically hybridises with a nucleic acid molecule encoding KOX 1 (also known as zinc finger protein 10, whose gene is CC located on chromosome 12q13-qter), and inhibits the expression of KOX 1, it cells or tissues by contacting the cells or CC expression of KOX 1 in cells or tissues by contacting the cells or CC condition associated with by KOX 1 administering to the animal a CC therapeutic or prophylactic amount of the compound and screening an CC antisense compound by contacting a preferred target region of a nucleic CC acid molecule encoding KOX 1 with one or more candidate antisense compounds and selecting for one or more candidate antisense compounds and selecting for one or more candidate antisense compounds the expression of a nucleic acid encoding KOX 1. The CC conditions associated with KOX 1, such as hyperproliferative disorders CC (e.g. cancer), conditions arising from bacterial or viral infection, or conditions involving hyperactivation of an immune response. They are also useful in research and diagnostics. The present sequence is an antisense CC coliconnection that the expression of the present sequence is an antisense CC consistent in the expression of the present sequence is an antisense CC consistent in the expression of the present sequence is an antisense CC consistent in the constant of the present sequence is an antisense CC consistent of the present sequence is an antisense CC consistent of the present sequence is an antisense CC consistent of the present sequence is an antisense CC consistent of the present sequence is an antisense CC consistent of the present sequence is an antisense CC consistent of the present sequence is an antisense CC consistent of the present sequence is an antisense CC consistent of the present sequence is an antisense CC consistent of the present sequence is an antisense CC consistent of the present sequence is an antisense CC consistent of the present sequence is an antis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC encoding KOX 1 (also known as zinc finger protein 10, whose gene is CC located on chromosome 12q13-qter), and inhibits the expression of KOX 1, (also known as zinc finger protein 10, whose gene is compound to the compound of the compound of the compound of the compound of the compound the cells or CC expression of KOX 1 in cells or tissues by contacting the cells or CC condition associated with by KOX 1 administering to the animal a CC therapeutic or prophylactic amount of the compound and screening an CC antisense compound by contacting a preferred target region of a nucleic CC acid molecule encoding KOX 1 with one or more candidate antisense compounds and selecting for one or more candidate antisense compounds the expression of a nucleic acid encoding KOX 1. The CC conditions associated with KOX 1, such as hyperproliferative disorders (e.g. cancer), conditions arising from bacterial or viral infection, or CC conditions involving hyperactivation of an immune response. They are also CC cuseful in research and diagnostics. The present sequence is an antisense CC conjound clottide targeting human KOX-1.
                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                        CC to, and which specifically hybridises with a nucleic acid molecule encoding KOX 1 (also known as zinc finger protein 10, whose gene is clocated on chromosome 12q13-qter), and inhibits the expression of KOX 1, i.e. an antisense oligonuclectide. Also included are inhibiting the cc is an antisense oligonuclectide. Also included are inhibiting the cc is sues with the compound, treating an animal having a disease or cc condition associated with by KOX 1 administering to the animal a cc therapeutic or prophylactic amount of the compound and screening an antisense compound by contacting a preferred target region of a nucleic card molecule encoding KOX 1 with one or more candidate antisense compound, composition and methods are useful for treating KOX 1. The conditions associated with KOX 1, such as hyperproliferative disorders conditions associated with KOX 1, such as hyperproliferative disorders (e.g. cancer), conditions arising from bacterial or viral infection, or conditions involving hyperactivation of an immune response. They are also useful in research and diagnostics. The present sequence is an antisense conjugonucleotide targeting human KOX-1.

The invention relates to a compound 8-80 nucleobases in length targeted to, and which specifically hybridises with a nucleic acid molecule encoding KOX 1 (also known as zinc finger protein 10, whose gene is coated on chromosome 12q13-qter), and inhibits the expression of KOX 1, in calls or tissues by contacting the cells or tissues by contacting the cells or tissues with the compound, treating an animal having a disease or condition associated with by KOX 1 administering to the animal a cherapeutic or prophylactic amount of the compound and screening an antisense compound by contacting a preferred target region of a nucleic acid molecule encoding KOX 1 with one or more candidate antisense compounds and selecting for one or more candidate antisense compound, composition and methods are useful for treating diseases or conditions associated with KOX 1, such as hyperproliferative disorders conditions associated with KOX 1, such as hyperproliferative disorders conditions associated with KOX 1, such as hyperproliferative disorders in the contact and diagnostics. The present sequence is an antisense

ID ADM93184 standard; DNA;
      닭
           The invention relates to a compound 8-80 nucleobases in length targeted to, and which specifically hybridises with a nucleic acid molecule encoding KOX 1 (also known as zinc finger protein 10, whose gene is CC located on chromosome logis_qter), and inhibits the expression of KOX 1, in cells or tissues by contacting the cells or tissues with the compound, treating an animal having a disease or CC condition associated with by KOX 1 administering to the animal a CC therapeutic or prophylactic amount of the compound and screening an CC acid molecule encoding KOX 1 with one or more candidate antisense compound, composition and methods are useful for treating diseases or CC conditions associated with KOX 1, such as hyperproliferative disorders CC conditions associated with KOX 1, such as hyperproliferative disorders CC conditions associated with KOX 1, such as hyperproliferative disorders CC conditions associated with KOX 1, such as hyperproliferative disorders CC conditions associated with KOX 1, such as hyperproliferative disorders CC conditions arising from bacterial or viral infection, or
                                                                                                                                                                                                                                                                                                                                                                                                                                            (DOBI/)
(FREI/)
                                                                                                                                                                                                                                                                                                                New antisense oligonucleotides that inhibit the expression of the finger transcriptional repressor KOX 1, useful for treating condit such as cancer, and hyperactivation of an immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         modified_base

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
                                                                                                                                                                The invention relates to a compound 8-80 nucleobases in length targeted to, and which specifically hybridises with a nucleic acid molecule encoding KOX 1 (also known as zinc finger protein 10, whose gene is located on chromosome 12q13-qter), and inhibits the expression of KOX 1, e. an antisense oligonucleotide. Also included are inhibiting the expression of KOX 1 in cells or tissues by contacting the cells or issues with the compound, treating an animal having a disease or condition associated with by KOX 1 administering to the animal a therapeutic or prophylactic amount of the compound and screening an antisense compound by contacting a preferred target region of a nucleic acid molecule encoding KOX 1 with one or more candidate antisense.
                                            compounds and selecting for one or more candidate antisense compounds that inhibit the expression of a nucleic acid encoding KOX 1. The compound, composition and methods are useful for treating diseases or conditions associated with KOX 1, such as hyperproliferative disorders (e.g. cancer), conditions arising from bacterial or viral infection, or conditions involving hyperactivation of an immune response. They are all useful in research and diagnostics. The present sequence is a target
                                                                                                                                                                                                                                                                                                                                                                                                             New antisense oligonuclectides that inhibit the expression of the zinc finger transcriptional repressor KOX 1, useful for treating conditions such as cancer, and hyperactivation of an immune response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; ss; antisense; KOX-1; zinc finger protein 10; chromosome 12q13-qter; hyperproliferative disorder; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 20 BP; 7 A; 1 C; 9 G; 3 T; 0 U; 0 Other;

                                                                                                                          The present invention provides a method for identifying a set of extendible primers which can be used in the identification, typing and classification of genes. This can then be used to predict protein sequence and structure, in organ donation to match the organ with the receiver, and to identify bacteria in a sample. The method can be used type the human leukocyte antigen genes (HLA) and 16s rRNA genes in
                                                                                                                                                                                                                                          Identifying extendible primers for use in identification, or classification of a nucleic acid of an organism, allele or gene such as class 1/2 HLA comprises identifying all possible nucleotide sequences of

(I) and encoded polynucleotide are applicable in diagnosis and treatment of malignant tumour, hasmopathy, HIV infection, immunological diseases and various inflammation. This sequence represents a PCR primer used in the amplification of the aspartate/ornithine transcarbamylase 13
                                                                                                                                                                       Human; Fab; variable chain; heavy; light; region; VH; VL; HIV; gp120 3b1; 3b3; 3b4; 3b9; MT4; humanised; monoclonal antibody; MAb; immunoreaction; neutralisation; passive immunotherapy; PCR; amplify; polymerase chain reaction; PCR; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Aspartate and ornithine transcarbamylase 13 and encoded polynucleotide, applicable in diagnosis and treatment of malignant tumor, hemopathy, HIV infection, immunological diseases and various inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Aspartate/ornithine transcarbamylase 13; cytostatic; anti-HIV; antiinflammatory; immunostimulatory; malignant tumour; haemopatl HIV infection; immunological disease; inflammation; PCR primer;

This plasmid contains a sequence which encodes human Fab MT4, which comprises a variable chain heavy region (VH), which binds to HIV gpl20. The DNA amplified by these primers may be mutagenised to produce sequences encoding the Fab's 3b1, 3b3, 3b4 and 3b9. These Fab's have the same amino acid composition as MT4 but have randomised amino acids in the entire CDR1 and in four of the 18 amino acid residues in CDR3. The Fab's are used in the production of a human monoclonal antibody (MAb) which is capable of immunoreacting with, and neutralising HIV. The Mab's are capable of reducing HIV infectivity titre in an in vitro virus infectivity assay by 50% at a concentration of <100 ng of antibody per ml. They can be used to provide passive immunotherapy to HIV in a human. They neutralise HIV more effectively than antibodies
                                                                                                                                                                                                                                                                                                           Single nucleotide polymorphism; SNP; single nucleotide primer extension; SNPE; genotyping; agammaglobulinaemia; diabettes insipidus; cancer; Lesch-Nyhan syndrome; muscular dystrophy; familial hypercholesterolaemia; polycystic kidney disease; osteogenesis imperfecta; autoimmune disease; acute intermittent porphyria; rheumatoid arthritis; multiple sclerosis;
 New genotyping oligonucleotide, useful for detecting the presence,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide CC primer excension (SNPE) primers, and the sequences of regions flanking CC sites of single nucleotide polymorphisms SNPs. The present invention CC oligonucleotides of the invention. The PCR primers are used to amplify a CC SNP flanking sequence, the SNPE primer is used as genotyping primer. CC SNP flanking a single-nucleotide primer extension reaction. The coligonucleotides are useful for genotyping a nucleic acid sample by CC performing a single-nucleotide primer extension reaction. The CC oligonucleotides are useful for determining the presence absence or clentity of a SNP and for genotyping nucleic acid samples, for e.g. to CC assess by association analysis the genotype of an individual or group of cindividuals, having a pathological phenotypic traits suspected of being CC assess by association analysis the genotype of an individual or group of cindividuals, having a pathological phenotypic traits suspected of being CC assess by association analysis the genotypic traits include diseases e.g. CC osteogenesis imperfecta and acute intermittent porphyria. Phenotypic craits also include symptoms of or susceptibility to multifactorial CC traits also include symptoms of or susceptibility to multifactorial cdisease of which a component is or may be genetic such as autoimmune CC diseases, including, rheumatoid arthritis, multiple sclerosis, pathogenic confidence artenity analysis. The present sequence represents a single nucleotide confidence artenity analysis. The present sequence represents a single nucleotide confidence artenies are provided arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ7 or MDZ12, e.g. cancer.
                                                                                                                                      Example 8; SEQ ID NO 5561; 103pp; English
```

The present invention relates to novel human zinc finger-containing proteins and their coding sequences; MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2, MDZ7 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome 15q26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, or in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic acids and proteins are also useful for diagnosing or monitoring a disease caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic acids can also be used as probes to detect and characterize gross alterations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are altorations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are useful in constructing microarrays for measuring gene expression. The proteins are useful as therapeutic agents for gene therapy or as vaccines. The present sequence was used to illustrate the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2, MDZ7 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome 15q26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, or in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic acids and proteins are also useful for diagnosing or monitoring a disease caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic acids can also be used as probes to detect and characterize gross alterations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are useful in constructing microstrays for measuring gene expression. The proteins are useful as therapeutic agents for gene therapy or as vaccines. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                          New zinc finger-containing proteins and nucleic acids, useful in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ4, MDZ7 or MDZ12, e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2003-423107/40

The present invention relates to novel human zinc finger-containing proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome fip11.3 and MDZ12 is encoded at chromosome fip11.2 and MDZ12 is encoded at chromosome 15q26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, or in manufacturing a medicament for treating or preventing a disorder or in manufacturing a medicament for treating or preventing a disorder or in manufacturing a medicament for developmental disorders. The mucleic acids and proteins are also useful for diagnosing or monitoring a disease caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic

The probes useful in constructing microarrays for measuring gene expression. Th proteins are useful as therapeutic agents for gene therapy or as vaccines. The present sequence was used to illustrate the invention.
                                                                                                                Seguence
                                                                                                                                                          A method for the analysis of cDNA comprises (a) preparing an aggregate double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GENESEO files AAQ75547-075798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The

CC comprise variable and non-variable regions. The capture oligonucleotides to least once in each nucleic acid and a 3'-variable, discriminatory region that comprises all possible combinations of up to 10 nucleotides to allow binding of particular sorts of single stranded nucleic acids. The capture capture oligonucleotides to allow comprises a sequence of 10-50, particularly 15-25, T residues. The capture capture oligonucleotides are biotinylated and immobilised on a surface by interaction with streptavidin. The matrix is of plastic, ceramic, glass, conducting properties and especially in the form of a chip. Its surface is particularly a layer of (bio)molecular filaments and binding of single stranded nucleic acids to the surface is (quasi)covalent, supramolecular, physical, stimulated by an electrical field or through a molecular sieve. The method is used (i) for analysis of patterns, especially in mucosal, cariotity of pharmaceuticals and/or nutritional compounds, e.g. food acids twento, carboxyllc or fatty acid) or their derivatives, salts and captures of the complete spid. Its present acids to the complete spid. It expensive and reproducible representation of differences in pools of nucleic acid in a cell, and captures. The method provides rapid, inexpensive and reproducible method is based on comparison of nucleic acid pools. Since the method is based on comparison of nucleic acid pools. Since the method is based on comparison of nucleic acid pools. Since the method in the marchod of the house inad in the method of the house is pattern. ADK01281-ADK01344 represent compounds of the capture probase in the nucleic acid pools.

The polynucleotide, polypeptide and its antagonist are useful for treating e.g. embryo development teratogenesis, blood system disease, and growth development disturbance disease. The present sequence represents the human nucleotide reducing enzyme 59.62 cDNA isolating RT-PCR primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human nucleotide reducing enzyme 59.62 polypeptide and its encoding polynucleotide, for treating e.g. embryo development teratogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleotide reducing enzyme 59.62; embryo development; teratogenesis; blood system disease; human; RT-PCR; primer; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                             Human; cytostatic; embryo development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human peroxidase 18 with cytostatic, virus immunomodulatory, antiinflammatory and haemostatic activity. The prand encoding polynucleotide are used in diagnosis and treatment of malignant tumour, haemopathy, human immunodeficiency virus (HIV) infection, immunological diseases and various inflammations. The polynucleotide is useful for gene therapy. The present sequence is of a human peroxidase 18 PCR primer, useful to the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human peroxidase 18 and encoded polynucleotide, use treatment of malignant tumors, hemopathy, human imminfection, immunological diseases and inflammation.
The present invention relates to 15.18 (ABB7699). The kinase and treating diseases such as embryo
                                                                                                           A human serine/threonine protein kinase 15.18 polypeptide, and t polynucleotide encoding it, for treating e.g. embryo development
                                                                                                                                                                                                                                                                                        30-JUN-2000; 2000CN-00116980
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human serine/threonine protein kinase 15.18 PCR primer #2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ន្តន្តន្ត
CC perfect match, perfect mismatch, antisense match or antisense mismatch.

CR Also disclosed is a method of gene expression analysis. The array is used continuous gene expression levels by hybridisation to a DNA library, considering gene expression levels by hybridisation of tag-labelled compounds. The nucleic acid probes are specifically designed for analysis of at least one target sequence. The method of analysis comprises comprises are attached to a solid support. The nucleic acid probes and detecting the hybridisation. The nucleic acid probes are attached to a solid support. The analysis comprises or family members of a gene and a cross-species comparison. Each of the nucleic acid strictory gene expression levels, identifying biallelic markers or polymorphisms, containly members of a gene and a cross-species comparison. Each of the nucleic acid strictory or detect the sequence or specific contains of any gene, in mapping the 5' termini of mRNA molecules by the sequence of an approviously sequenced. The sequence of the nucleic acid probes is useful in in situ hybridisation, in Southern, Northern or dottentations of any gene, in mapping the 5' termini of mRNA molecules by containing segments of DNA that have been the include and previously sequenced. The sequence presented is one of the nucleic acid probes incorporated in the microarray. Note: The sequence containing the sequence presented is one of the solution of the patent can also be obtained in electronic format directly from USPTO at sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New array of nucleic acid probes, useful for in situ hybridization, Southern, Northern or dot-blot hybridization to identify or detect sequence or specific mutations of any gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cross-species comparison.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human microarray DNA oligonucleotide SEQ ID

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                      The invention discloses a microarray comprising a plurality of nucleic cc acid probes including one of 2,018,500 fully defined sequences, or its CC perfect match, perfect mismatch, antisense match or antisense mismatch. CC Also disclosed is a method of gene expression analysis. The array is used CC in monitoring gene expression levels by hybridisation to a DNA library, CC in analysis of genetic variation or in hybridisation to a DNA library, CC in analysis of genetic variation or in hybridisation to a DNA library, CC in the least one target sequence. The method of analysis comprises CC of at least one target sequence. The method of analysis comprises CC hybridising at least one or more nucleic acids to at least two or more concleic acid probes and detecting the hybridisation. The nucleic acid grobes are attached to a solid support. The analysis comprises monitoring CC gene expression levels, identifying biallelic markers or polymorphisms, CC or family members of a gene and a cross-species comparison. Each of the nucleic acid grobes is useful in in situ hybridisation, in Southern, Northern or dotonthy hybridisation to identify or detect the sequence or specific cutations of any gene, in mapping the 5' termini of mRNA molecules by primer extensions or in screening cDNA or genomic libraries or subclones CC isolated and previously sequenced. The sequence presented is one of the cutation of this patent can also be obtained in electronic format directly cc form USPTO at segdata.uspto.goc/sequence.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      吊
The present invention describes a short interfering nucleic acid (siNA) CC that downregulates expression of a mitogen-activated protein kinase CC (MAPK) genes by RNA interference. Also described: (1) a method for modulating expression of MAPK genes in cells, tissue explants or CC organisms by introduction of siNA; (2) kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or complexes of siNA; and (4) vectors that express siNA and cells containing these vectors. MAPK siNAs CC thave cytostatic, anorectic, antidiabetic, antinflammatory, and interference antiasthmatic, immunosuppressive, antibacterial, antivities. The MAPK CC antiasthmatic, antipsoriatic and gastrointestinal activities. The MAPK CC siNAs can be used to modulate the expression of MAPK genes, in cells, cand il; a wide range of tumours, and inflammatory diseases (asthma, septic shock, rheumatoid arthritis, psoriasis and inflammatory bowel captic shock, rheumatoid arthritis, psoriasis and inflammatory bowel disease). They can also be used for drug screening; diagnosis; target cidentification and validation; genetic engineering; pharmacogenomics;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches 20;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             short interfering nucleic acid; siNA; downregulation; inhibition; mitogen-activated protein kinase; MAP kinase; MAPK; RNA interference; cycostatic; anorectic; antidiabetic; antiinflammatory; antiasthmatic; immunosuppressive; antibacterial; antirheumatic; antiarthritic; antipsoriatic; gastrointestinal; obesity; diabetes; tumour; inflammatory disease; asthma; septic shock; rheumatoid arthritis; psoriasis; inflammatory bowel disease; drug screening; psoriasis; inflammatory bowel disease; drug screening; ss.
The present invention describes a short interfering nucleic acid (siNA) that downregulates expression of a mitogen-activated protein kinase (MAPK) genes by RNA interference. Also described: (1) a method for modulating expression of MAPK genes in cells, tissue explants or organisms by introduction of siNA; (2) kits for in vitro or in vivo delivery of siNA; (3) conjugates and/or complexes of siNA; and (4) vectors that express siNA and cells containing these vectors. MAPK siNAs have cytostatic, anorectic, antidabetic, antiinflammatory, antiasthmatic, immunosuppression, antiasthmatic, antipsoriatic and gastrointestinal activities. The MAPK siNAs can be used to modulate the expression of MAPK genes, in cells,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             studying gene function and gene mapping (e.g. of single-nucleotide polymorphisms). The present sequence represents a MAPK siNA which is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and II; a wide range of tumours, and inflammatory diseases (asthma, septic shock, rheumatoid arthritis, psoriasis and inflammatory bowel disease). They can also be used for drug screening; diagnosis; target identification and validation; genetic engineering; pharmacogenomics; studying gene function and gene mapping (e.g. of single-nucleotide polymorphisms). The present sequence represents a MAPK siNA which is used in the exemplification of the present invention.
      Sequence 24
                                                                                                 cytostatic, virucidal, immunomodulatory, antiinflammatory and haemostatic activities. The polynucleotide encoding (I) can be used in gene therapy. (I) and the polynucleotide encoding (I) can be used in gene therapy. (II) and the polynucleotide encoding it are applicable in the diagnosis and treatment of malignant tumour, haemopathy, human immunodeficiency virus (HIV) infection, immunological diseases and various inflammations. The present sequence represents a PCR primer for human FD 17, which is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antiinflammatory; gene therapy; malignant tumour; haemopathy;

                                                                                                                                                                                                                                                                                                      activation subunit 14, and the polynucleotide encoding it. Also describ is the process for preparing the protein by DNA recombination and the application of the polypeptide and polynucleotide in treating various diseases such as malignant neoplasms, haematopathy, human immunodeficiency virus (HIV) infection, immunological diseases, and various inflammations. Antagonists against the polypeptide can also be used in treating such diseases. The present sequence for reverse transcriptase (RT)-PCR primer #2 is used with RT-PCR primer #1 (ABK1371 for isolating cDNA encoding human transcriptional activation subunit 14

FD14 and its coding sequence are useful for treating several diseases, such as malignant tumours, embryo and tissue maldevelopment, immunodeficiency diseases, various acquired and hereditary disease and immune disease. The present sequence is a PCR primer, which was used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human EDF-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 24

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   १
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
This invention relates to a novel method for the characterisation of the activity of a compound on cell. The method involves receiving images of cells with a cellular activity and images of other cells treated with the compound, quantitatively characterising phenotypic attributes of the image of cells with a cellular activity to produce a target phenotype for the cellular activity and that image of other cells to produce a second phenotype for the compound, and comparing the two phenotypes to determine whether the compound possesses cellular activity. The invention
                                                                                                                                                                                                                                                                                                                                                 Characterizing cellular activity of compound, by receiving images of cells with known activity and images of cells treated with compound, characterizing phenotypic attributes of images and comparing the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human EDF-1 protein 9.13, polynucleotide encoding this polypeptide and DNA recombinant processes to produce the polypeptide. The present invention also discloses the method of applying the polypeptide in treating various diseases, such as blood vessel development disorder, haemangioma, various tumours, inflammations and immunological diseases. The present invention also discloses the application of the polypucleotide present invention also discloses the application of the polynucleotide for encoding human EDF-1 protein 9.13. The present sequence is that of the buman EDF-1 protein 9.13 PCR primer, useful to examples of the

                                                                                This invention describes a novel method for identifying an inhibitor potentially useful for treatment of cancer, where the inhibitor is active on a gene vital for cell growth or viability, and where the gene is subject to loss of heteroxygosity (LOH) in a cancer. The inhibitor is used for preventing the development of cancer in a patient having a precancerous condition, by administering to the patient a first allele specific inhibitor (ASI) targeted to an allele of a first essential gene present in cells of the precancerous condition, where the normal somatic cells of the patient are heteroxygous for the first gene, the inhibitor is active on at least one but less than all allelic forms of the gene present in a population and targets only one allelic form present in the normal somatic cells, and the first gene. The products and methods can be used in the diagnosis, prevention and treatment of LOH disorders, e.g.
cancers, atherosclerotic plaques, premalignant etaplastic or dysplastic lesions, benign tumours, endometriosis, polycystic kidney disease, and graft versus host disease. The method can also be used to remove
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        may be useful for characterising cellular activity of a compound, for determining information about properties of substances based upon the information about structure of living or non-living cells exposed to substances. The invention is also useful for identifying promising candidates in a search for new and better medicines and treatments using multiple biological descriptors from a single cell markers or components.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying target genes for allele-specific drugs - used for diagnosis, prevention and treatment of, e.g. cancers, atherosclerotic plaque, dysplastic lesions, endometriosis or graft versus host disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Polymorphism; human; inhibitor; cancer; treatment; cell growth; LOH; cell viability; loss of heterozygosity; precancerous condition; ASI; callel specific inhibitor; somatic cell; diagnosis; prevention; atherosclerotic plaque; premalignant metaplastic lesion; endometriosis; dysplastic lesion; benign tumour; polycystic kidney disease; transplant; graft versus host disease; malignant cell removal; bone marrow; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                             A method for the analysis of cDNA comprises (a) preparing an aggregate of double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GENESEQ files AAQ75547-Q75798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               04-AUG-1995
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 21 BP; 5 A;

CC compositing oligonuclectides, effective for alleviating composition of ignouncentriction, respiratory tract inflammation, allergies and composition adenosine sensitivity, levels of adenosine (A) or (A) receptors, compression of a target polyposecretion, when administered to a mammal. The coligonuclectides are derived from a gene encoding or regulating conjugation of a target polyposecretion, when administered to a mammal. The coligonuclectides are derived from a gene encoding or regulating conjugation of a target polypositide associated with lung airway or lung conjugation of the invention also describes a kit, that comprises: (a) a delivery constitution is expression of the invention has antiallergic, antiafinalmanatory, antiasthmatic, antiafinalmanic composition of the invention has antiallergic, antiinflammatory, antiasthmatic, is a composition comprises oligo and is administered to reduce the production of the inventing a respiratory, lung or malignant disease. The administered composition composition composition is useful for preventing or creduce the amount of target polypoptide present in the lungs. The composition and/or bronchoconstriction and/or lung inflammation, allergies and/or bronchoconstriction and/or lung conflammation, allergies, asthma, impeded respiration, respiratory conflammation, enghysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the oligonuclectides into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonuclectide into products that free adenosine into the system content of the anti-sense oligos corresponding to the oligonuclectide into products that free adenosine into the system content of the system content of the system content of the system content of the content of the system content of the Pharmaceutical composition for treating asthma, has antisense oligonucleotide containing less percentage of adenosine, targeted nucleic scids associated with lung airway or lung dysfunction, and respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; surfactant; reportation; cytostatic; cystic fibrosis; beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysems; chronic obstructive pulmonary disease; cancer; bronchitis; Claim 15; SEQ ID NO 4788; 763pp; English 24-APR-2001; 2001US-0286036P Homo This invention describes a novel composition (a) a first active 23-APR-2002; 2002WO-US013143 pulmonary transplantation rejection; ds.                                         The present invention relates to a compound which specifically hybridizes with a nucleic acid molecule encoding GFAT, and inhibits the expression of GFAT. Specifically claimed are antisense oligonucleotides capable of modulating the expression of GFAT, and which comprise any of the 3063 sequences of 20 base pairs, given in the specification. The compound, composition and methods are useful for treating a disease or condition associated with GFAT, such as a disease or condition, e.g. diabetes, a cardiovascular or neurological disease or condition, e.g. diabetes, a cardiovascular or neurological disease or condition injury. They are also useful in research and disgnostics for modulating the expression of GFAT. The present sequence represents a chimeric phosphorothicate oligonucleotide with 2'-MCE wings and a deoxy gap, these
                                                                                                                                                                                                                                           New compounds, particularly antisense oligonucleotides targeted to a nucleic acid encoding glutamine-fructose-6-phosphate amidotransferase (GFAT), for treating diabetes, a cardiovascular or neurologic disorder ischemia/reperfusion injury.
                                                                                                                                                                                                                                                                                                                                                                                                        17-OCT-2002; 2002US-0419268P

                                                                                                                                                                                     The present invention relates to a compound which specifically hybridizes with a nucleic acid molecule encoding GFAT, and inhibits the expression of GFAT. Specifically claimed are antisense oligonucleotides capable of modulating the expression of GFAT, and which comprise any of the 3063 sequences of 20 base pairs, given in the specification. The compound, composition and methods are useful for treating a disease or condition associated with GFAT, such as a disease or condition, e.g. diabetes, a cardiovascular or neurological disorder, ischemia/reperfusion injury. They are also useful in research and diagnostics for modulating the
                                                                                                                  Sequence
                                                                                                                                            They are also useful in research and diagnostics for modulating expression of GFAT. The present sequence represents a chimeric phosphorothicate oligonucleotide with 2'-MOE wings and a deoxy oligonucleotides inhibit human GFAT expression.
                                                                                                                                                                                                                                                                                                                                                                                New compounds, particularly antisense oligonucleotides targeted to a nucleic acid encoding glutamine-fructose-6-phosphate amidotransferase (GFAT), for treating diabetes, a cardiovascular or neurologic disorder,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 17-OCT-2002; 2002US-0419268P.

Collection of diploid fungal cells each of which comprises modified collection of diploid fungal cells each of which comprises modified cellses of a different gene; a strain of diploid fungal cells comprising comodified alleles of a gene, where the first allele of the gene is comprising an expressible selectable marker; and the expression of the sequence encoding an expressible selectable marker; and the expression of the second allele of the gene is regulated by a heterologous promoter that is operably linked to the coding region of the second allele of the gene, and where the gene encodes the polypeptide mentioned above; a collection of diploid fungal strains comprising the diploid strains cited above, where substantially all the different genes that encode the above amino acid sequences are modified and are present in different diploid comprising any of the 310 nucleotide sequence is the provide sequence comprising any of the 310 nucleotide sequences listed in the specification (Appsg816-Appsg825); identifying a gene that is essential to the survival or growth of a fungue, that contributes to the virulence of adiploid fungus to an antifungal agent; identifying an antifungal capant for treatment of a mammalian disease; correlating changes in the capanters of proteins or gene transcripts with the inhibition of growth or gene transcripts with the inhibition of growth or caid molecule comprising a gene product consists of any of the above—mentioned amino acid sequences; a vector comprising a promoter operably linked to the nucleic acid molecule cited above; a host cell containing the vector; a purified or isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Constructing a strain of diploid fungal cells in which both alleles of gene are modified comprises modifying the alleles of a gene in the fung cells by recombination using a gene disruption cassette and a promoter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel method for constructing a strain of diploid fungal cells in which both alleles of a gene are modified. The method comprises modifying the alleles of a gene in diploid fungal cells by recombination using a gene disruption cassette and a promoter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Diploid fungal cell; promoter replacement

CC product encoded by a nucleic acid compound against a target gene product encoded by a nucleic acid compound against a target gene created encoded by any of ADP98516.

CC product encoded by a nucleic acid compound against a target gene cc product encoded by a nucleic acid compound against a target gene cc product encoded by a computer readable medium that comprises at cc least one amino acid sequence selected from ADP9816.

CC nated and apprecial article acid compound apprecial activity or level of a tleast one amino acid sequence selected from ADP98166-ADP99135; a entitively essential gene compositions have fungicide activity. The compositions may be used in gene therapy. The composition and methods and compositions and the control of an anima acid sequence or a portion of an anima acid control of an anima acid control of a manima acid control of a manima acid control of a manima acid control of a manima
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
